

# How to find Safety data sheets on the Coloris Website

Stempelfarben · Stamping inks · Encre à tampon · Tintas de sello

Inks should have a variety of qualities - slow or quick drying, permanent or washable, light-fast and many more. Sometimes very special qualities are expected. Products of this nature can only be developed by specialists with a great deal of experience.

## Search result

- [to homepage](#)
- 947 IV - Stamping inks for plastics and rubber** [Show product](#)  
947 IV was developed especially for printing presses using cartridges with integrated felt or foam rubber reservoir. The binding agent prevents the ink cartridge diaphragms from sticking.  
[Show product](#)
- 981 - Stamping inks for metals** [Show product](#)  
981 is an extremely fast drying, translucent stamping ink developed specially for tin cans. The high quality binding agent gives better temperature resistance than with CO4713.  
[Show product](#)
- 990 - Universal stamping inks** [Show product](#)  
Versatile stamping ink for non-porous surfaces, very similar to R9 but specially developed for use with photo polymer stamps  
[Show product](#)
- Luminous stamping ink 948 - UV luminous stamping inks** [Show product](#)  
Colourless stamping ink visible as intensive blue fluorescent colour under UV light at a wavelength of 366 nm.  
[Show product](#)
- R 9 - Universal stamping inks** [Show product](#)  
Extremely versatile stamping ink. Excellent both for manual stamping as well as automatic marking with flexographic presses.  
[Show product](#)
- R 9 FP - Stamping inks for food and food packaging** [Show product](#)  
These slightly slower drying stamping inks were specially developed according to current EU guidelines for use in the foodstuffs packaging industry.

R 9

[back to previous page](#)

Extremely versatile stamping ink. Excellent both for manual stamping as well as automatic marking with flexographic presses.

Properties:

Weather resistant, relatively colour fast, translucent, partially pigmented, solvent-based stamping ink.

Application:

We recommend translucent stamping ink R9 for marking all light materials such as high gloss brochures, metal and plastic foils, painted sheet metal and wood as well as unpainted aluminium. However, it is also well-suited for various types of rubber and plastics. Pigmented R9P can also be used for marking dark backgrounds, because it has a far greater covering capacity. R9PF and the faster drying version R9FP/IST are also suitable for marking food packages!

Drying time:

7 - 9 minutes (metal sheet)

metal

Viscosity: from ~15seconds (glazing) up to 65seconds (pigment) (Ford 4mm cup)

Stamp material: Rubber

Stamp pad material: We recommend our special MarkIt pad for keeping the ink moist for stamping for a long period without drying out. However felt plate pads, felt rollers, foam rubber rollers or the Soli plate pads can also be used.

Thinner/cleaner: Thinner 405

Available standard sizes: 50ml/g - 250ml/g 1000ml/g - 5000ml/g
