Neutralon

COLORIS®

This special liquid was developed especially for neutralization of Coloris steel etching ink. It reacts immediately neutralizing the excess acid.

Properties:
The fluid can also attack the material even on insensitive surfaces, because it is a highly caustic liquid. Use only the amount of solution required and as little as possible for neutralization

Caution:
Caustic liquid! Take appropriate care when handling!

Processing instructions:
Treat stamp impressions or corroded surfaces using a cotton swab saturated with Neutralon to neutralize the etching effect of the acid. Then wash off the surface with clear water and coat with oil or grease to prevent rusting.

Available standard sizes:
50ml/g · 250ml/g · 1000ml/g
