

Oil-base pigmented stamping ink developed especially for metal stamps, pagination machines and numbering machines. The special chemicals ensure that the pagination machines and numbering machines do not become sticky and that the metal stamps are not corroded.

## Properties:

This stamping ink is very economical for high colour, light resistant marking.

## Application:

We recommend the oil-based numbering machine ink 4734 P for marking all absorbent materials such as paper, brochures and cardboard. It is used primarily in the office area on papers with continuous numbers. Coated paper such as high-gloss brochures are usually not particularly well suited for marking with 4734 P, because the coating usually prevents penetration into the paper. However, use may be possible from case to case.

## Drying time:

~60sec smudge-proof (paper)

## Viscosity:

highly viscous ~100sec  
(Ford 4mm cup)

## Stamp material:

Metal, pagination machines, numbering machines

## Stamp pad material:

We recommend unsaturated felt plate pads or the SOLI plate pads. The ink remains moist for stamping for a long period without drying out in all stamp pads.

## Thinner/Cleaner:

Thinner 445,  
Cleaner 390

## Available standard sizes:

12x20ml/g Tube only black · 50ml/g ·  
250ml/g · 1000ml/g
