

4062 P

COLORIS®

Similar to the **CONSTANTA P**, the quick-drying stamping ink **4062 P** is based on high-quality pigments, but in this case an additional anti-counterfeiting protection has been built in, which can be seen under UV light but cannot be copied. The only important thing is that the paper does not contain any optical brightener, as this glows in the same wave range as the marker.

Properties:

The special colour pigments cannot be removed subsequently in chemical processes, making it extremely resistant. It also has a very high resistance to light so that it does not bleach out. It soaks into the paper quickly and has particularly sharp edges.

Application:

We recommend 4062 P for marking important documents such as official seals, certificates or confirmations which require indelible marking.

Drying time:

~30sec smudge-proof (paper)

Viscosity:

highly viscous ~20sec
(Ford 4mm cup)

Stamp material:

Rubber or photo polymers

Stamp pad material:

We recommend unsaturated COLORIS pads, felt plate pads or the SOLI plate pads. The ink remains moist for stamping for a long period without drying out in all stamp pads.

Thinner/cleaner:

Cleaner GF

Available standard sizes:

50ml/g · 250ml/g · 1000ml/g

Opaque
