

Felt plate pad

COLORIS®

This metal box with the replaceable felt pad is meant for pigmented stamp-pad inks and volatile solvent inks, which cannot be used with a normal office stamp pad nor with the soli plate pad, because the pigments are too coarse.

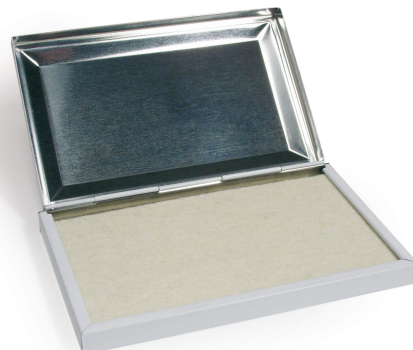

Properties:

A separating layer makes it possible to use the felt pads on both sides. To prevent the ink passing from one side to the other, only the smallest amounts ought to be applied and worked into the felt using a glass rod or a cork. Applying only a small amount of ink also prevents the impression from becoming blurred and the stamp from clogging up.

Application:

Pigmented special inks must be well shaken or stirred before use so that any pigment sediment is dispersed. We recommend this stamp-pad for use with so many quick-drying, solvent-based stamp-pad inks, that it is not possible to list them all here.

Please request our recommendation in any specific case.

Tin with two feltpads

Pad surface size:

Size 1: approx. 165x90mm

Size 2: approx. 118x67mm

Refill pack

(5 felt pads per pack)

Pad surface size:

Size 1: approx. 165x90mm

Size 2: approx. 118x67mm
