

Steel etching pad

COLORIS®

Our synthetic COLORIS stamp-pad with its special cotton pad is ideal for highly corrosive special inks Steel etching ink 4726 and Bronze oxide 4727.

Properties:

This highly robust insert makes it possible to have a reservoir that does not immediately disintegrate or harden under highly corrosive conditions, at least for some time.

The high-quality of this cotton fleece also provides a certain amount of protection against acidic splashes, as it has a very firm, smooth surface.

Please request our recommendation in any specific case.

Pads Available:

Synthetic box
