

Luminous stamping ink III

COLORIS®

Colourless stamping ink visible as intensive blue fluorescent colour under UV light at a wavelength of 366 nm.

Features:

It dries quickly to smooth, nonporous surfaces.
This ink is not necessarily suitable for marking human skin since there are no dermatological tests were carried out.

Application:

We recommend this stamping ink for all types of metals such as ferrous metal, aluminum, steel and many plastics or other non-absorbent materials like wood.

Note:

White surfaces are suitable in the rarest of cases for safety markings, as they often have an optical brightener which competes in the same wavelength range with the same colour and lights. In these cases it is better to use the luminous stamp ink 4430 P yellow!

Drying time:

~ 30 - 60 sec smudge-proof (metal)

Viscosity:

low viscosity, ~ 12sec
(Ford 4mm cup)

Stamp material:

rubber

Medium Type:

For manual stamping, we recommend our office stamp pad with felt or felt plate and SOLI plate pads. In automatic markers are prints with ink rollers of rubber, working with ink reservoirs are preferable to others.

Thinner / Cleaner:

thinner 410

Available standard sizes:

50ml · 250ml · 1000ml
