500 P

COLORIS®

Pigmented stamping ink for temporary marking of linens, e.g. for quality control or production steps. In spite of it's intense colour, this stamping ink hardly soaks into the fiber so that it can usually be removed easily from common textiles by washing with warm water and standard commercial detergents.

Note:
Due to the variety of fibers and types of fabrics it is advisable to perform a preliminary suitability test. Particularly on natural fibers such as cotton, a wash test should always be accomplished previously to check the removability due to differing annual material qualities.

Application:
We recommend 500 P for marking all types of fabrics such as polyester, nylon and rayon, as well as for cotton, satin and linen.

pH value:
~7.5 ±1 (20°C)

Viscosity:
medium viscosity, ~40 - 60sec
(Ford 4mm cup)

Stamp material:
Rubber or special photo polymers

Stamp pad material:
We recommend our unsaturated felt plate pads. The ink remains moist for stamping for a long period without drying out in this stamp pads.

Thinner/cleaner:
Thinner 430

Available standard sizes:
50ml/g · 250ml/g · 1000ml/g
